## Chest Radiograph AI Evaluation — Basilar Atelectasis

Report ID: REP-2026-0003 | Type: Radiology

| | | | |
|---|---|---|---|
| **atient Name** | David Miller | **Report Date** | 01 Nov 2026, 09:45 |
| **atient ID** | PAT-2026-0003 | **Attending Physician** | Dr. Sarah Jenkins |
| **eport Status** | APPROVED | **Specialization** | Thoracic Radiologist |

## Clinical Summary

Automated DenseNet-121 model flagged elevated risk for Pneumothorax (61.6% confidence). Clinically evaluated and signed by attending thoracic radiologist.

## Clinical Findings

Plate-like horizontal opacities in bilateral lung bases consistent with subsegmental atelectasis.

## Recommendations

Incentive spirometry 10 breaths/hour while awake. Early ambulation protocol.

## AI-Assisted Analysis Note
